When you are sick or injured, getting a quick and accurate diagnosis is key. At Moore Medical Center we are committed to providing our patients and community with the latest state-of-the-art imaging technology with the highest diagnostic accuracy.

A clear picture allows physicians to prescribe appropriate treatments and gets you back on the road to health. Moore Medical Center uses digital radiography, which delivers high quality images in mere seconds, enabling quicker diagnosis and treatment. With our array of services, experienced staff, and convenient hours and location, Moore Medical Center provides the best in diagnostic imaging – right in your own neighborhood.

We Offer:
- Open MRI - Routine head, spines, joints, MR arthograms, MRA head and neck
- CT - Routine, cardiac calcium scoring, bone mineral density, CT angiography and more
- Digital Radiography
- Nuclear Medicine - Whole body bone scans, lung ventilation scans, renal function scans, hepatobiliary scans, myocardial perfusion stress tests and more
- Ultrasound - Obstetrics, abdominal, vascular, cardiac echo and more
- Mammography - Screening and Diagnostic
- Fluoroscopy - Barium enema, Upper GI, Arthograms, Myelograms
- Picture Archival and Communication System (PACS)

This system allows images to be burned on a disk to take to your physician.

Answers to Your Imaging Questions

I’m afraid of small, enclosed spaces. What options do I have if my doctor orders an MRI?

At Moore Medical Center, we have an open MRI. All MRI machines use a magnetic field and pulses of radio wave energy to make pictures of organs. In a standard MRI machine, the patient lays on a table that slides into a tube containing the magnet. In an open MRI machine, the large magnet does not surround one’s body but is positioned above and below. An open MRI cannot perform some types of MRI scans, so please consult with your doctor.

Is there anything I need to do to prepare for my test at Diagnostic Imaging Services?

You will be given specific instructions prior to your test. Most tests and scans do not require you to fast or refrain from drinking fluids. Depending on the area of your body being tested, jewelry, glasses or hairpins can interfere with results so it's recommended to remove them. We also suggest wearing comfortable, loose-fitting clothing with no zippers or metal clasps.

I’ve heard the term cardiac calcium scoring. What is it?

Cardiac calcium scoring uses a CT scan to check for calcium buildup on the walls of the coronary arteries. This test can be used to check for early stages of heart disease. Physicians may recommend this test for patients who have risk factors for heart disease, such as family history or diabetes, but present no clinical symptoms.

Expert Staff

Not only do picture perfect results require the right equipment – they need the right people as well. At Moore Medical Center, all staff is registered or eligible for registration through the American Registry of Radiologic Technologists, the world’s largest credentialing organization that seeks to ensure quality care in radiologic technology.

- All exams are read by board-certified radiologists
- Most of our staff holds advanced-certification in many modalities such as MRI, CT, Ultrasound and Mammography
- Moore Medical Center's Diagnostic Imaging mammography department is recognized by the U.S. Food and Drug Administration (FDA) for the highest quality standards
