

## Our Physicians

**M. DANIEL ISBELL, M.D.**

Dr. M. Daniel Isbell performs a wide range of general surgery procedures and brings continued innovation to Norman Regional Health System. He performs vascular access for dialysis patients.

Dr. Isbell is skilled with laparoscopic techniques using minimal incisions, such as hernia repair, gallbladder removal and colon surgery. Dr. Isbell graduated from the University of Oklahoma College of Medicine. He completed his residency at Carolina Medical Center, Charlotte, North Carolina, where he was the Chief Surgery Resident.

**GAUTAM DEHADRAI, M.D.**

Dr. Gautam Dehadrai is a board-certified radiologist and performs interventional radiologic procedures at Norman Regional Hospital. He has served as Chairman of the Department of Radiology

at Norman Regional Hospital and Moore Medical Center. Dr. Dehadrai completed an interventional radiology fellowship at the University of New Mexico College of Medicine.

# Vascular Access

Norman Regional  
HEALTH SYSTEM

# Treatment for dialysis, long-term infusions and other vascular access needs.

## The Vascular Access Center

Norman Regional Health System's Vascular Access Center is the state's first and only hospital-based center that focuses on patients needing treatment for dialysis, long-term infusions as well as other vascular access needs. The Center is a one-stop destination where patients can seamlessly complete all necessary pre-operative work in one convenient location. In a hospital our patients will have easier access to lab work, X-rays, ultrasound and other diagnostic testing. Also if something is identified that requires more treatment or admission to a hospital, Norman Regional is able to provide that advance care.

The Vascular Access Center is located on the first floor of Norman Regional Hospital. **You may park on the northeast side of the building.** Registration is conveniently located at the Vascular Access Center itself. Patient's lab work, diagnostics, procedure and recovery are all done in the comforts of Norman Regional Hospital.

Our team of expert physicians, nurses and staff are dedicated to providing a positive experience for our patients and their families.

## Our Services

The Vascular Access Center is a one-of-a-kind hospital based center dedicated to patients needing vascular access. Services include:

- Placement of new AV fistulas
- Declotting of existing AV fistulas
- Ballooning of vascular anatomy to ensure proper flow
- Placement of dialysis catheters (both temporary and long-term/tunneled)
- Peritoneal drain catheters
- PICC lines
- Assessing current dialysis catheters for proper function
- Deep vein thrombosis treatments or removal

*Norman Regional has a Hospitality House for those traveling long distances who may need overnight accommodations. To check room availability and rates, please call (405) 307-6691.*

## Why Visit?

Treating problems that obstruct vascular access is important to your overall health and prevents delays in your dialysis treatments. The earlier problems are caught and treated, the better your outcome may be. A vascular access point needs to remain open and operable to complete dialysis or a patient will quickly become ill. Please help us by contacting your physician at the earliest sign of trouble. Signs something may be wrong with your access site include:

- If the sound referred to as the "thrill" disappears. The thrill is a sign that the access site is functioning.
- Swelling, bleeding or signs of infection at the access site.
- If you have an unexplained fever.
